

MODEL P530A 6-10VDC TRANSMITTER

THIS UNIT IS DESIGNED TO CONTROL CERTAIN DANFOSS HYDRAULIC VALVES THAT REQUIRE SIX TO NINE OR SIX TO TEN VOLTS CONTROL VOLTAGE.

The output is controlled by a control voltage of 0 to 5 VDC applied to pin one, or by a 10K pot connected to terminals 1, 2, and 3..

The output voltage is linearly proportional to the input voltage (or potentiometer position).

TYPICAL APPLICATION
